PROJECTS

Playlistr — playlistr-io.herokuapp.com/ | GitHub

Live group listening for Spotify built with React and socket.io

- Synced user's playback queue with Spotify API and MongoDB
- Developed RESTful API using Express, Mongoose and MongoDB
- Built stateful track search dropdown from scratch
- Subscribed a user's socket to a channel for a specific room with socket.io

Project Tracker — trackitproject.herokuapp.com/ | GitHub

Agile development project manager

- Created RESTful API with Express, MySQL and Sequelize
- Encrypted sensitive user login data with bcrypt.js
- Used Express middleware to compress payloads for improved API performance

Directory — hermanjohn2.github.io/employee-directory-react/ | GitHub

Sortable employee data view built with React

- Manipulated form state with vanilla React
- Developed generic table components styled with react-bootstrap

Eat Da Burger — eat-da-burger-jh.herokuapp.com/ | GitHub

Node app allowing users to create burger names and devour them

- Implemented MVC design pattern using Handlebars.js as the view layer
- Developed RESTful API with Express and MySQL
- Styled application using Foundation Framework
